

Residential Natural Gas Water Heater

This residential natural gas water heater is designed for providing hot water in homes. The tank is built to withstand high water pressure and temperature.

Product Overview

Reliable Residential Hot Water Solution

This residential natural gas water heater is engineered to provide consistent and efficient hot water delivery for home environments. Featuring a robust, insulated cylindrical tank, the unit is designed to minimize heat loss while maintaining performance under high water pressure and temperature conditions. Equipped with essential safety features and a precise gas control valve, this unit offers a dependable solution for indoor residential water heating needs.

Technical Specifications

Installation	Indoor
Fuel Source	Natural Gas
Tank Design	Insulated Cylindrical

Safety & Control

Control System	Gas control valve
Safety Features	Pressure Resistant, Temperature Resistant, Regulated Gas Supply
