

Residential Sewage Ejector Pump System

This sewage ejector pump system is designed for residential or light commercial applications. It efficiently pumps wastewater from below-grade fixtures to a higher elevation for discharge into a gravity sewer line.

Product Overview

Compact Residential Sewage Solution

This self-contained sewage ejector pump system is engineered to provide efficient wastewater management for below-grade installations. It reliably handles drainage from toilets, wash basins, showers, bathtubs, and washing machines. Designed for quiet and dependable performance, it is an ideal solution for basements or laundry rooms where traditional gravity drainage is not accessible.

Technical Specifications

Performance Metrics

220 V Rated Voltage	700 W Rated Power	50 Hz Frequency
-------------------------------	-----------------------------	---------------------------

Pumping Capability

Metric	Value
Max Flow Rate	7.8 m ³ /h
Max Vertical Lift	9 m
Max Horizontal Transmission	90 m

Installation Details

Inlet Interfaces	WC, Wash Basin, Shower Room, Bathtub, Washing Machine
Total Inlets	4
