

Residential Solar Power Inverter

This inverter is designed for residential solar photovoltaic (PV) systems, converting direct current (DC) electricity from solar panels into alternating current (AC) electricity. When a power outage occurs, important appliances connected to the inverter's EPS port will remain working until the stored energy is used up.

Product Overview

Residential Solar Power Solution

This residential solar power inverter is designed to convert DC electricity from solar panels into usable AC power for your home. It features an integrated EPS port designed to keep critical appliances running during power outages, providing reliable backup energy. With a typical capacity of 10kWh, it is engineered to support essential household needs throughout the day, ensuring energy independence and efficiency.

Technical Specifications

Typical Energy Capacity	10 kWh
Primary Application	Residential, Solar PV Systems, Grid-tied

Key Features

Performance Highlights
