

Residential Solar Power System

This solar power system provides a complete energy solution for residential use. It features high-efficiency solar panels, a robust inverter, and all necessary components for seamless integration.

System Overview

Comprehensive Solar Power Solution

This residential solar power system provides an all-in-one package for efficient energy generation and management. The solution integrates high-performance solar panels with versatile inverters and battery energy storage to achieve energy independence. Built with durable mounting structures and high-quality accessories, this system is designed for easy installation and long-term reliability.

Solar Modules

Maximum Power Output

670 Wp
Peak Power

Technology

Mono PERC, Half-cut Technology

Inverter Specifications

Inverter Power Range

1.1KW to 255KW

Monitoring

Yes

System Components

Included Components

- Solar Panels
- Inverter
- Battery Energy Storage System (BESS)
- Mounting Structure
- DC/AC Cables
- Distribution Box

Mounting & Hardware

Mounting Material

Aluminum Alloy
