

Residual Current Circuit Breaker (RCCB)

Residual Current Circuit Breakers (RCCB) are designed for electrical safety. These devices protect against electric shock and prevent electrical fires by quickly disconnecting the circuit when a leakage current is detected.

Product Overview

Professional Electrical Safety Solutions

These Residual Current Circuit Breakers (RCCB) are engineered to provide essential electrical safety in commercial and industrial environments. Designed to detect leakage current, these devices automatically disconnect circuits to prevent electric shock and mitigate the risk of electrical fires. With robust construction and intuitive manual controls, they ensure reliable protection and ease of operation for facility maintenance.

Technical Specifications

Available Rated Currents

- 40
- 63

Trip Current Sensitivity

30 mA

Pole Configurations

Single-pole, Four-pole

Features

Safety & Control

Test Button • Manual Reset Lever • Leakage Protection

Performance Highlights

30 mA

Trip Sensitivity

63 A

Max Rated Current
