

Resin Bonded Emery Cloth Abrasive

This emery cloth is made of abrasive grains bonded to a cloth backing with resin. It is used for sanding, polishing, and grinding various materials and comes in different grit sizes.

Product Overview

High-Performance Resin Bonded Emery Cloth

This resin bonded emery cloth is a versatile abrasive material designed for professional sanding, polishing, and grinding applications. Featuring durable emery grains bonded to a sturdy cloth backing, it offers exceptional heat resistance and longevity for both hand and machine use. It is an essential tool for surface preparation, deburring, and rust removal across the metalworking, woodworking, and automotive industries.

Material Composition

Bonding Agent

Resin Bonded

Abrasive Grain

Emery

Backing Material

Cloth

Technical Performance

Key Features

Heat Resistant, Durable, Flexible Backing

Available Grit Sizes

Coarse to Fine

Application & Usage

Target Industries

- Metalworking
- Woodworking
- Automotive

Common Applications

- Sanding and Polishing
- Grinding
- Deburring
- Rust Removal
- Surface Preparation

Application Methods

Hand Sanding, Machine Application
