

Reverse Osmosis Water Purification System

This high-efficiency reverse osmosis system is designed for residential or light commercial use. Its multi-stage filtration incorporates sediment pre-filtration, activated carbon filtration, and a high-rejection RO membrane to provide clean, safe drinking water.

Overview

Professional Reverse Osmosis Purification

This high-efficiency reverse osmosis system is engineered for reliable residential and light commercial water purification. Utilizing a comprehensive multi-stage filtration process, it effectively removes impurities, contaminants, and dissolved solids to deliver clean, safe drinking water. The system features a compact footprint and color-coded connectivity to ensure seamless installation and straightforward maintenance.

Technical Specifications

Filtration Technology

- Sediment pre-filtration
- Activated carbon filtration
- High-rejection RO membrane

Connection Ports

- Power Input
- Flush Port
- Water Inlet
- Purified Water Outlet

Design & Convenience

Compact Design, Color-coded Ports, Status Indicator Lights, Space-saving
