

Reversible Plate Compactor

This reversible plate compactor is designed for compacting cohesive soils, such as clay and silt. It is suitable for small repair jobs, narrow confined areas, trenches or housing sites and can also be used on sand and gravel.

Overview

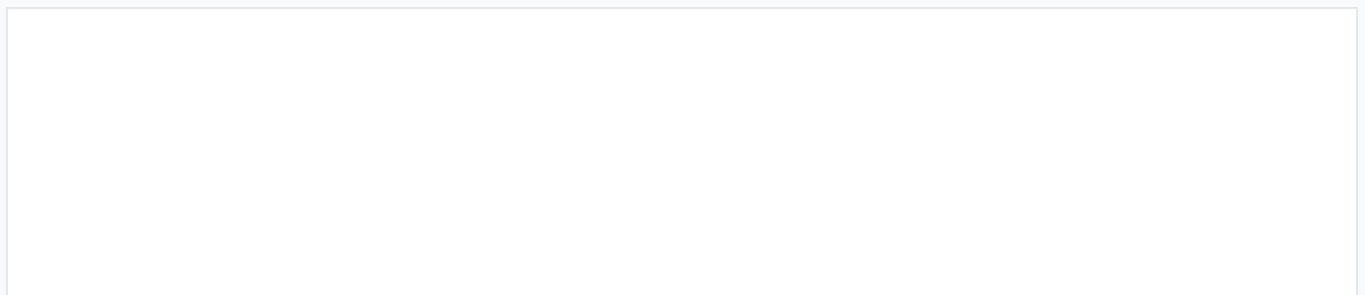

A robust reversible plate compactor designed for efficient soil and asphalt compaction.

Professional Compaction Solution

This reversible plate compactor is engineered for high-efficiency soil and asphalt compaction in demanding construction environments. Designed for versatility, it excels in compacting cohesive soils like clay and silt, while remaining effective on sand and gravel. Its robust construction and reversible functionality ensure precise maneuverability in narrow confined areas, such as trenches and housing sites.

Key Advantages

Engineered for heavy-duty compaction tasks with high impact force.

Why Choose This Model

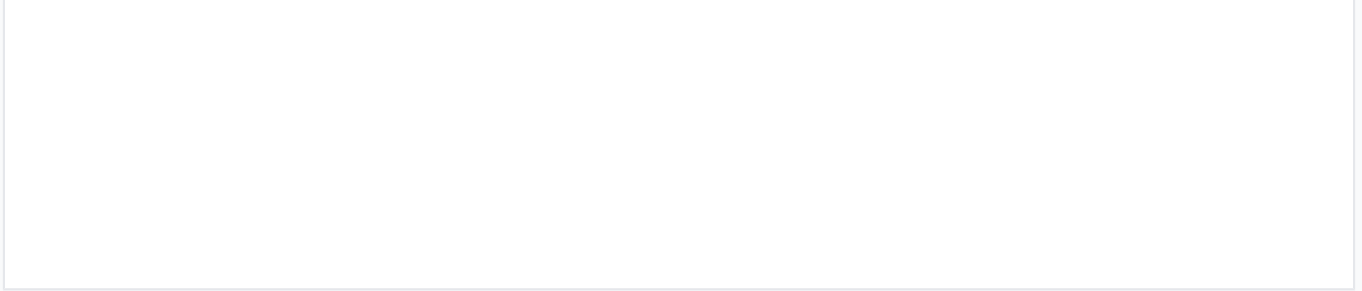

- Economical operation with low maintenance and usage costs
- Reliable durability for long-term site performance
- Special design for cohesive soil compaction
- Suitable for confined spaces like trenches and housing sites
- Versatile application on sand, gravel, and asphalt

Technical Specifications

Performance Metrics

| Model | Power (kW) | Weight (kg) | Compaction Depth (cm) |
|-------|------------|-------------|-----------------------|
| MS50 | 1.8 | 54 | 20 |
| MS60 | 4 | 62 | 20 |

Key Features

Ergonomic design ensures operator comfort and ease of use in harsh working conditions.

Key Features

Reversible, Low Maintenance, Cohesive Soil Ready, Confined Space Operation, Heavy Duty
