Product Overview

Professional Soil Compaction Solution

The reversible plate compactor is engineered for high-performance compaction of granular materials including river sand, gravel, and asphalt. Its reversible design provides superior maneuverability in confined spaces and trenches, ensuring optimal coverage. Built with a high-performance engine and a robust base plate, it is designed for demanding construction and landscaping environments.

Technical Specifications

Key Operational Features

- Ergonomic handle for operator comfort
- Vibration system for optimal force
- Durable heavy-duty base plate
- Directional control system

Compatible Materials	River Sand, Gravel, Asphalt
Engine Type	Honda GX 200
Operation Mode	Reversible (Forward and Reverse)
