

RF Tuner Modules for Broadcasting

RF tuner modules designed for radio and television broadcasting. The modules are shielded and feature multiple input/output ports.

Product Overview

Professional RF Tuner Modules

These RF tuner modules are precision-engineered for professional radio and television broadcasting applications. Featuring robust electromagnetic shielding and high-density connectivity, they ensure signal integrity and reliable performance in demanding environments. Their compact form factor is specifically designed for seamless integration into broadcast equipment, telecommunications infrastructure, and high-performance electronic signal processing systems.

Key Design Attributes

- Electromagnetic interference shielding
- Multiple input/output connectivity ports
- Compact integration-ready form factor
- Optimized for radio and television signal processing

Available Models

MBM-13, MBM-01, MBM-07, MBM-15
