

RG Series 75Ω Coaxial Cable

RG series 75Ω coaxial cables are designed for transmitting radio frequency signals. They feature a central conductor, insulation, shielding, and an outer jacket.

Overview

RG Series High-Performance Coaxial Cables

The RG Series 75Ω coaxial cables are engineered for superior radio frequency signal transmission with minimal signal loss. Featuring a robust construction of a central conductor, insulation, shielding, and a durable outer jacket, these cables are designed to meet diverse performance requirements. They are ideal for professional installations including antenna systems, satellite receivers, and cable television equipment.

Technical Specifications

Characteristic Impedance

75 Ω

Impedance

Cable Construction

- Central Conductor
- Insulation Layer
- Shielding
- Outer Protective Jacket

Applications

Common Applications

Antenna Systems, Satellite Receivers, Cable Television Equipment, RF Signal Transmission
