

RG11 Coaxial Cable

This RG11 coaxial cable is designed for high-performance signal transmission, featuring a solid copper conductor and foam dielectric insulation. Its braided and foil shielding provides excellent protection against EMI and RFI, ensuring low signal attenuation and superior signal integrity.

Product Overview

High-Performance RG11 Coaxial Cable

This RG11 coaxial cable is engineered for high-performance signal transmission across long distances. Featuring a solid copper conductor for optimal conductivity and robust shielding, it effectively minimizes electromagnetic and radio frequency interference. It is an ideal solution for reliable CATV, satellite TV, and broadband internet infrastructure in both commercial and residential settings.

Construction & Materials

Conductor Material	Solid Copper
Dielectric Insulation	Foam
Shielding	Braided Shield, Foil Shield

Performance & Application

Applications

- Cable Television (CATV)
- Satellite TV
- Broadband Internet

Key Performance Metrics

1 Low

Signal Attenuation

Installation Types

Residential • Commercial
