

# RG11M Coaxial Cable

RG11M coaxial cables are designed for high-performance signal transmission. The cables are suitable for applications requiring low signal loss and high bandwidth, such as cable television, satellite communication, and broadband internet.

## Overview

### High-Performance RG11M Coaxial Cable

The RG11M coaxial cable is engineered for high-performance signal transmission, making it an ideal choice for demanding applications such as cable television, satellite communication, and broadband internet. Featuring a robust construction with a central conductor, precision dielectric insulation, and multi-layer shielding, this cable provides low signal loss and high bandwidth. It is designed to ensure reliable connectivity and optimal signal integrity in professional installations.

## Technical Specifications

Model	RG11M Standard-shield
Inner Conductor	1.63mm (Cu, CCS)
Dielectric	7.2mm PE-form
Jacket Outer Diameter	10 mm
Messengered Diameter	1.8 mm

## Shielding & Construction

### Braiding Specifications

Parameter	Available Options
Braiding Diameter	0.12mm, 0.15mm, 0.16mm
Wire Net Count	72, 96, 120 and up
Coverage	60%, 80%, 90% and up
Foil Shielding Options	AL+Pol, AL+Pol+AL, Bonded AL+Pol
Braiding Materials	Copper, AL-Mg Alloy, Tinned Copper
