

RG59 Coaxial Cable with 18/2 Power Cable

This RG59 coaxial cable includes an 18/2 power cable for shipboard applications. It is designed with a copper conductor, foam polyethylene dielectric, and braided shield, encased in a durable jacket for marine environments.

Product Overview

Marine Grade Connectivity Solution

This RG59 coaxial cable integrated with 18/2 power lines is specifically engineered for shipboard radio-frequency applications. Combining high-performance signal transmission with reliable power delivery, it ensures stable connectivity for marine communication systems and navigation equipment. Built with a durable jacket and high-quality shielding, this cable is designed to withstand the rigorous demands of harsh marine environments.

Technical Specifications

Cable Construction	RG59 Coaxial, 18/2 Power Pair, Shielded, Marine Grade
Conductor Material	Copper
Dielectric Type	Foam Polyethylene
Shielding	Braided Shield

Application

Recommended Applications

- Shipboard radio-frequency systems
- Marine communication systems
- Navigation equipment
- Onboard electronic devices
