

Rice Grading Machine

This precision machine efficiently separates and grades white rice. Its multi-deck screening system has adjustable settings to ensure accurate classification based on size and quality.

Product Overview

Precision Rice Grading Solution

The White Rice Grader is a precision machine engineered for the efficient separation and classification of white rice grains. By utilizing a multi-deck screening system, this machine accurately sorts rice based on size and quality to ensure consistent product standards. Its compact, robust construction is designed for continuous operation in demanding processing environments, offering high throughput with minimal product damage.

Technical Specifications

Operational Capabilities

- Continuous sieving operation
- Separation of whole rice and broken rice
- Uniform feed distribution mechanism
- Adjustable screening settings

Model Variants

MMJP63X3, MMJP80X3, MMJP100X3, MMJP100X4

Design & Maintenance

Design Advantages

- Compact and reasonable construction
- Easy maintenance and cleaning access
- Steady performance in industrial environments
- Space-saving design for line integration
