

Rice Milling Machine

This agricultural machinery is a rice milling machine. It processes rice grains, removing the husk and bran layers to produce polished rice.

Overview

Professional Rice Milling Solution

This rice milling machine is a robust agricultural processing unit designed to efficiently convert raw rice grains into polished white rice. It features an integrated system comprising a feeding hopper, a dedicated milling chamber, and an automated separation mechanism to effectively remove husk and bran layers. Ideal for small to medium-scale agricultural operations, this equipment streamlines the post-harvest processing workflow to ensure high-quality output.

Technical Specifications

Key Components

- Feeding Hopper
- Milling Unit
- Bran/Rice Separation System
- Material Elevation System

Operational Scale

Small-Scale • Medium-Scale

Primary Function

Husk Removal, Bran Removal, Rice Polishing
