

Rice Milling Machine for Grain Processing

This rice milling machine is engineered for efficient and comprehensive rice processing. It integrates multiple functions, including cleaning, husking, separating, and polishing to produce high-quality white rice.

Product Overview

Comprehensive Rice Milling System

This advanced rice milling solution integrates cleaning, husking, separating, and polishing into a single, compact unit. Engineered for high yield and minimal grain breakage, the system ensures consistent white rice production through automated, continuous operation. Its robust construction and environmental features, such as dust and stone removal, offer significant economic benefits for professional milling facilities.

Performance Metrics

Operational Efficiency

Energy Consumption

Technical Features

Integrated Functions

- Cleaning and Washing
- Stone Removal
- Dust Removal
- Husking
- Paddy Separation
- Polishing

Design Advantages

Compact Structure, Smooth Operation, High Rice Yield, Environmental Protection
