

Rice Milling Rubber Roller

This is a component for rice milling machines. It is made with a rubber outer layer and a metallic core.

Product Overview

Professional Rice Milling Solution

This high-quality rubber roller is engineered for precision and durability in automatic rice milling operations. Designed with an optimized rubber outer layer bonded to a metallic core, it provides the ideal balance of friction and pressure required for efficient husk removal. Its robust construction ensures long-lasting performance while minimizing grain breakage, making it an essential component for high-output processing facilities.

Technical Specifications

Compatibility

- Automatic rice milling machines
- Various industrial rice processing applications

Key Features

Durable Construction • Metallic Core • Optimized Friction

Available Colors

Brown, White

Component Type

Rice Milling Rubber Roller
