

Rice Polishing Machine with Iron Roll

This rice polisher uses a durable iron roll to effectively remove bran and impurities from rice grains. It is equipped with a feeding hopper for continuous operation and a cyclone dust collector to minimize dust emissions.

Product Overview

High-Efficiency Rice Polishing

This Iron Roll Rice Polisher is a robust and efficient machine specifically engineered for high-quality rice processing. It utilizes a durable iron roll mechanism to effectively remove bran and impurities from rice grains, ensuring a superior finish. Designed for continuous operation, the unit includes a feeding hopper and an integrated cyclone dust collector to maintain a cleaner working environment.

Technical Specifications

Model Identifier	IP-B
Polishing Mechanism	Iron Roll

Key Features

Core Functionalities

- Durable iron roll mechanism
- Continuous operation feeding hopper
- Integrated cyclone dust collection
- Compact and sturdy construction

Application Suitability	Rice Processing, Industrial Milling, Grain Refining
-------------------------	---
