

Rice Polishing Machine with Single Roller

This machine is designed for polishing rice grains, achieving a desired level of whiteness and smoothness. It utilizes a single roller mechanism to gently remove bran layers from the rice kernels, minimizing breakage and maximizing yield.

Product Overview

Professional Rice Polishing Solution

The Single-Roller Rice Polisher is a robust and efficient machine designed for achieving precise whiteness and smoothness in rice grains. It utilizes a specialized single-roller mechanism that gently removes bran layers while minimizing breakage to maximize your operational yield. With adjustable polishing pressure and airflow, this machine provides the versatility needed to handle various rice varieties effectively in small to medium-sized processing facilities.

Key Features

Adjustable Parameters

Adjustable Polishing Pressure, Variable Airflow, Bran Removal, High Yield Maintenance

Design and Components

Primary Components

- Feeding hopper
- Polishing chamber with rotating roller
- Bran collection system
- Control panel

Build Quality

Durable Construction • Easy Maintenance

Application

Ideal Facility Size

Small to medium-sized rice processing facilities
