

Rice Whitening Machine

This high-efficiency machine is designed for whitening rice grains. It uses a combination of abrasive action and air blowing to remove bran layers, resulting in polished and whitened rice.

Overview

High-Efficiency Rice Whitening Solution

The Air Blowing Rice Whitener is a professional-grade machine engineered for superior rice processing. By combining abrasive action with an integrated air blowing system, it effectively removes bran layers to produce polished, high-quality white rice. Designed for durability and versatility, this machine allows for adjustable whitening degrees to suit various processing requirements and plant scales.

Technical Specifications

Core Components

- Feeding Hopper
- Whitening Chamber
- Adjustable Abrasive Rollers
- Air Blower System

Processing Method	Abrasive Action, Air Blowing
-------------------	------------------------------

Performance

Suitability

Rice Processing Plants • Various Scales

Whitening Control	Yes
