

Right Angle EPE Foam Laminating Machine

This high-speed laminating machine increases production with the efficiency of up to eight operators. It laminates expanded polyethylene without glue, preventing yellowing and ensuring neat, accurate results.

Product Overview

Professional EPE Laminating Solution

The Right Angle EPE Foam Laminating Machine is designed for high-efficiency production of corner protectors and edge guards. It utilizes advanced hot air technology to bond EPE sheets without the need for additional adhesives, ensuring an environmentally friendly and cost-effective process. The system provides precise control over lamination parameters, making it an essential asset for manufacturers specializing in high-quality protective packaging materials.

Technical Specifications

Key Features

- Right angle laminating
- Automatic hot air heating during feeding
- Adjustable lamination speed
- Precision cutting system

Bonding Method	Hot air plasticization forming
Adhesive Requirement	No
Heating Source	Electric hot air gun

Production Capabilities

Operational Metrics

0 kg
Glue Usage
