

Right Angle Industrial Gearbox

This industrial gearbox is designed for robust power transmission. It features a right-angle configuration with precision-machined gears for smooth and efficient operation.

Product Overview

Robust Industrial Power Transmission

This industrial gearbox is engineered for demanding power transmission applications, featuring a reliable right-angle configuration where input and output shafts are arranged perpendicularly. The unit is built with a durable cast iron housing, ensuring excellent rigidity and long-term resistance to wear in heavy-duty environments. Precision-machined internal gears are utilized to facilitate smooth, efficient operation while effectively minimizing noise and vibration during use.

Mechanical Design

Configuration	Right Angle
Housing Material	Cast Iron
Key Features	Right-angle shaft arrangement, Precision-machined gears, Low vibration, Low noise

Identification

Model Markings

- 23.6.10.
- J031009
