

# Rim Forming Equipment

This equipment is designed for shaping rims with precision. It utilizes a multi-stage forming process with rollers and dies to ensure consistent results.

## Product Overview

### Industrial Rim Forming Capabilities

The ZCQ01(F) Rim Forming Equipment is a specialized industrial solution engineered for high-precision rim shaping. Designed for high-volume production environments, the machine utilizes a multi-stage process with dedicated rollers and dies to ensure consistent quality. Built on a robust frame, it offers the stability and durability required for demanding manufacturing operations.

## Technical Specifications

### Tooling Configuration

- Multiple sets of rollers
- Precision dies

Process Type	Multi-stage forming
Construction Features	Robust Frame, Integrated Control Panel, High-Volume Ready

## Performance

### Key Operational Benefits

High Precision • Consistent Quality • Stability
