

Ringlock Scaffolding Standard with Rosette Connectors

This Ringlock standard serves as a vertical component in scaffolding systems. It features integrated rosette connectors at regular intervals for connecting ledgers and braces.

Product Overview

Versatile Scaffolding Standard

The Ringlock Scaffolding Standard is a primary vertical component designed for high-strength, modular scaffolding systems. Featuring integrated rosette connectors at regular intervals, it allows for the seamless attachment of horizontal ledgers and diagonal braces. Its robust steel construction ensures maximum structural integrity and stability for professional construction and industrial maintenance projects.

Key Features

Product Highlights

- High-strength steel construction
- Integrated rosette connection points
- Modular design for rapid assembly
- Optimized for industrial and construction use

Technical Specifications

Component Type	Vertical Scaffolding Standard
System Compatibility	Ringlock System, Horizontal Ledgers, Diagonal Braces

Usage

Recommended Applications

Construction • Building Maintenance • Industrial Infrastructure
