

# River Regulation Project

This project focuses on flood control and water resources management. It features engineered waterways and water diversion structures.

## Project Overview

### Huaihe Ruhaishuidao Infrastructure

The Huaihe Ruhaishuidao is a large-scale river regulation project engineered to manage water flow and basin resources. It incorporates advanced water diversion structures, dams, and engineered waterways to effectively control flooding. This infrastructure is critical for improving water resource management and facilitating navigation throughout the Huaihe River basin.

## Infrastructure Details

### Key Components

- Water diversion structures
- Dams
- Engineered waterways
- Control towers
- Concrete channels

### Primary Functions

Flood Control, Water Resource Management, Navigation Support
