Product Overview

Enhancing Highway Safety and Visibility

These high-quality glass beads are specifically engineered to be embedded into highway safety markings, creating highly reflective lines that remain visible through darkness, rain, and fog. By improving retroreflectivity, these beads play a critical role in directing drivers safely along the road under poor weather conditions. They are widely utilized by highway safety authorities and road marking companies globally to meet rigorous safety standards for delineation and guidance systems.

Technical Specifications

Packaging Details

- Net weight: 25kg
- Bulk bag packaging

Certifications & Standards

SAE, ISO 9001, SGS

Size Range

1-10

Performance Metrics

Primary Use

Highway Delineation • Road Marking Paint • Guidance Systems

Performance Benefits

- Enhanced retroreflectivity
- Improved visibility in low-light conditions
- Resistance to environmental factors
- Long-lasting durability
