

Road Roller Compactor for Civil Engineering

This heavy-duty road roller is designed for compacting soil, gravel, concrete, or asphalt. It is used in the construction of roads and foundations.

Product Overview

Professional Compaction Solution

This heavy-duty road roller is engineered for high-performance compaction of soil, gravel, concrete, and asphalt in large-scale civil engineering projects. Built for durability and precision, it ensures stable foundations and smooth road surfaces by delivering optimal ground pressure. It is an essential asset for infrastructure development, highway construction, and site preparation tasks.

Performance Metrics

Performance Capacity

14 ton

Operating Weight

Operational Features

Capabilities	Soil Compaction, Asphalt Finishing, Highway Construction, Heavy Duty
Model ID	YZ14J6
