

Roasted Bean Processing Machinery

Machinery designed for processing roasted beans into various products. It ensures consistent roasting and prepares beans for packaging or further processing.

Product Overview

Roasted Bean Processing Solution

This industrial-grade machinery is engineered for the efficient processing of broad beans (fava beans) and similar legumes. Designed to achieve a consistent golden-brown roast, the system ensures a crisp texture and optimal flavor profile suitable for high-quality snack production. It is an essential component for food processing lines focused on healthy, savory legume snacks.

Product Type

Food Processing • Snack Machinery • Legume Roasting

Output Quality

Finished Texture	Crisp and crunchy
Visual Characteristics	Golden-brown color, Whole bean integrity, Uniform roast
