

Robotic Vacuum Cleaner for Automated Floor Cleaning

This robotic vacuum cleaner is designed for automated floor cleaning. It autonomously navigates and cleans floors with its sensors and brushes.

Overview

Automated Cleaning Solution

This robotic vacuum cleaner is engineered for efficient, autonomous floor maintenance in residential and light commercial environments. Featuring a sleek circular design and intelligent navigation sensors, it minimizes the need for manual intervention. The integrated control panel and display allow for easy monitoring of operation modes and scheduling, ensuring consistent cleanliness with minimal effort.

Design & Interface

User Interface

- Central display panel
- Time display
- Operation mode indicator
