

Rock Drilling and Piling Machinery

This heavy-duty machinery is designed for mineral processing and extraction. It is engineered for demanding industrial applications in the mining and construction sectors, specifically for rock drilling and piling operations.

Overview

Heavy-Duty Industrial Performance

This rock drilling and piling machinery is engineered for demanding industrial applications in both mining and construction sectors. Featuring a robust frame construction and advanced hydraulic systems, the equipment is designed to withstand harsh environments while delivering efficient and reliable performance. Precision engineering ensures consistent operation for critical extraction and foundation tasks.

Technical Specifications

Construction Features

- Robust frame construction
- Advanced hydraulic systems
- Large central shaft design

Performance Highlights

1 Precision

Operational Focus

Primary Application

Rock Drilling, Piling Operations, Mineral Extraction, Construction
