

Rock Drilling Casings

These casings are designed for rock drilling and piling applications. Their modular design allows for easy assembly and disassembly, ensuring efficient installation and maintenance.

Overview

High-Performance Rock Drilling Casings

These robust casings are designed for demanding rock drilling and piling applications, providing essential structural support and protection during drilling operations. Constructed from high-strength materials, they are engineered to withstand harsh construction environments while ensuring long-term reliability. The modular design facilitates efficient assembly and disassembly, optimizing installation and maintenance workflows on-site.

Technical Standards

Manufacturing Standard

Bauer Standard Compliant

Quality Control Process

- Strict deformation control via heat treatment
- High-precision accuracy monitoring
- Standardized technical parameters

Interchangeability

Yes

Compatibility

Compatible Equipment Brands

Bauer, Soilmec, Casagrande

Design Features

Key Design Features

- Cylindrical modular configuration
- Evenly spaced circular end openings
- Secure fastener systems
- High-strength material construction

Primary Application

Rock drilling and piling structural support
