

Rocker Arm for Metal Forming Machines

Precision-engineered for metal forming machines, this rocker arm is constructed from durable materials. It ensures reliable performance and longevity under demanding operating conditions.

Product Overview

Precision-Engineered Rocker Arm

This rocker arm is specifically designed for high-performance metal forming machines. Constructed from durable, high-quality materials, it ensures reliable operation and longevity even under demanding industrial conditions. The component features a robust pivot point and a smooth roller surface, engineered to facilitate efficient force transmission while minimizing wear to maximize overall machine uptime.

Technical Details

Part Identification	70993784
Model Code	TG
Primary Application	Metal Forming Machines

Performance Features

Design Highlights

- Robust pivot point for stability
- Smooth roller surface for efficient force transmission
- Wear-resistant construction
- High-durability material composition
