

Rocker Joint Silent Chain for Power Transmission

This rocker joint silent chain is engineered for efficient and quiet power transmission. Its precision-engineered rocker joints reduce friction and extend chain life.

Product Overview

High-Performance Silent Transmission

This rocker joint type silent chain is engineered for superior power transmission in demanding industrial environments. The precision-designed rocker joints significantly reduce friction, leading to extended service life and quieter operation. Constructed from high-strength alloy steel, it offers exceptional durability under high-load and high-speed conditions.

Technical Specifications

Part Reference

G.005-004

Joint Type

Rocker joint

Material

High-strength alloy steel

Performance Features

Key Benefits

Quiet Operation, Reduced Friction, High-Speed Compatible, High-Load Capacity, Wear Resistant
