

Roll-Up Shutter Door Forming Machine

This machine efficiently produces roll-formed metal profiles for roll-up shutter doors. It utilizes a series of shaped rollers to progressively bend metal strips into the desired profile.

Overview

Industrial cold roll forming line for high-quality metal profile production.

High-Efficiency Shutter Door Production

This industrial cold roll forming machine is engineered for the high-precision manufacturing of metal profiles used in roll-up shutter doors. Combining a robust frame with an automated control system, it delivers consistent dimensional accuracy for both commercial and industrial door applications. The equipment is designed for reliable, continuous production with adjustable parameters to meet diverse material thickness and profile requirements.

Technical Specifications

Automated control system with touch screen interface for precise operational management.

Material Specifications

Parameter	Value
Material Type	Color steel plate
Processing Thickness	0.6 - 1.2 mm
Feeding Width	1250 mm
Roller Material	Carbon Steel 45#
Blade Material	Cr12

Power Requirements

- Main Motor Power: 3kw
- Hydraulic Pump Power: 3kw

Mechanical Build

- Side Panel Thickness: 14mm
- Roller Diameter: 42mm

Performance Metrics

Performance Metrics

12 m/min

Max Production Speed

25 rows

Max Roller Stands

1 mm

Precision Tolerance
