

Roller Chain for Industrial Conveying

This roller chain is designed for power transmission and conveying applications. It features hardened steel components for durability and precision-engineered rollers for smooth operation.

Overview

High-Strength Industrial Conveying Chain

This high-strength roller chain is engineered specifically for power transmission and heavy-duty conveying applications. Constructed from hardened steel, it offers exceptional durability and an extended service life in demanding industrial environments. Precision-engineered rollers and bushings ensure smooth operation while minimizing friction, making it a reliable choice for various industrial machinery and equipment.

Technical Specifications

Key Features

- Precision-engineered rollers
- Hardened steel construction
- Reduced friction design
- Extended service life

Configuration

Multiple Sizes • Custom Configurations
