

Roller Conveyor Chain

This high-strength roller chain is designed for power transmission and conveying applications. It is constructed from hardened steel components for durability and wear resistance.

Product Overview

High-Strength Roller Conveyor Chain

This high-strength roller chain is expertly designed for demanding power transmission and industrial conveying applications. Constructed from hardened steel components, it ensures exceptional durability and wear resistance even in challenging environments. Precision-engineered rollers and bushings facilitate smooth operation and reduced friction, making it a reliable choice for various industrial machinery and conveyor systems.

Technical Specifications

Key Features

- Precision-engineered rollers
- Hardened steel construction
- Reduced friction bushings
- Wear-resistant design

Availability

Various Sizes • Multiple Configurations

Material	Hardened Steel
Primary Applications	Power Transmission, Conveying Systems, Industrial Machinery
