

Roller Conveyor Chain

High-strength roller chain designed for power transmission and conveying applications. Constructed from hardened steel components for durability and wear resistance.

Product Overview

High-Performance Roller Conveyor Chain

This high-strength roller chain is expertly designed for demanding power transmission and conveying applications. Constructed from hardened steel components, it offers exceptional durability and wear resistance in heavy-duty industrial environments. The design features precision-engineered rollers and bushings to ensure smooth operation and significantly reduced friction during use.

Technical Specifications

Key Performance Features

- Precision-engineered rollers
- Hardened steel construction
- Reduced friction operation
- High wear resistance

Material	Hardened Steel
Primary Applications	Power Transmission, Conveying, Heavy-duty Machinery

Availability

Configuration Options

Various Sizes • Multiple Configurations
