

Roller Tip Rocker Arm Assembly

This rocker arm assembly incorporates a roller tip to decrease friction and wear. Its curved profile optimizes valve train geometry, contributing to efficient engine performance.

Product Overview

High-Performance Valve Train Component

This Roller Tip Rocker Arm Assembly is engineered to minimize friction and wear within the valve train. Featuring a precision-machined roller tip, the design ensures smooth operation and promotes extended service life under demanding conditions. Constructed from durable, high-strength metal, this component is built to maintain optimal valve train geometry and reliability.

Technical Specifications

Design Type	Roller Tip
Material	Steel, Cast Iron

Identification

Part Number
70993785

Model Code
T9

Key Features

Key Performance Features

- Reduced friction roller tip design
- Optimized valve train geometry
- Durable metal construction
- Central pivot bushing included
