

Rolling Bearing Component Set

This component set includes cylindrical bushings, a mounting plate, and a bearing insert. These components are critical for reducing friction and enabling smooth rotational or linear movement in mechanical systems.

Product Overview

Industrial Rolling Bearing Set

This comprehensive set of rolling bearing components is engineered for high-performance industrial machinery, providing essential support for rotational and linear movement. The assortment includes precision-machined cylindrical bushings, a specialized perforated mounting plate, and durable bearing inserts designed to minimize friction. Built for demanding environments, these components offer the wear resistance and reliability necessary for critical mechanical systems.

Technical Details

Included Components

- Cylindrical bushings (various sizes)
- Perforated mounting plate
- Curved bearing insert

Material Characteristics

Metallic construction, Wear-resistant, Precision-engineered

Applications

Common Industrial Applications

- Mechanical friction reduction
- Rotational movement support
- Linear movement guidance
