

Rolling Door Motor

This rolling door motor is designed for efficient operation. It features a geared mechanism for smooth and controlled movement, suitable for industrial and commercial applications.

Product Overview

Professional Rolling Door Solution

The JLZX500D is a robust and efficient rolling door motor engineered for seamless access control in industrial and commercial environments. This unit features a precision-gearred mechanism designed to provide smooth, controlled door movement and long-term reliability. Equipped with a manual override system for emergency access, it ensures operational continuity and high-security standards for facility managers.

Technical Features

Included Components

- Motor unit
- Mounting plate
- Drive chain
- Manual override keys

Model Number

JLZX500D

Key Attributes

Industrial Grade, Manual Override, Geared Mechanism, Electric Power
