

Roof Mounted Ventilator for Residential and Commercial Use

This roof-mounted ventilator is a robust and efficient ventilation solution suitable for residential and commercial applications. It effectively removes stale air and moisture, improving indoor air quality and reducing the risk of mold and mildew.

Product Overview

High-Efficiency Ventilation Solution

The VRM-150 is a robust and efficient ventilation solution designed for both residential and commercial applications. Its aerodynamic design optimizes airflow to effectively remove stale air and moisture, significantly improving indoor air quality while reducing mold and mildew risks. Built for durability, the unit features a galvanized steel base for corrosion resistance and a UV-resistant polymer dome for long-lasting protection against harsh environmental conditions.

Performance & Build

Key Features

- Aerodynamic airflow optimization
- Corrosion-resistant base
- Low-noise operation
- Weather-resistant construction
- Easy installation

Construction Materials

Galvanized Steel, UV-Resistant Polymer

Applications

Suitability

Residential • Commercial
