

Roofing Panel Roll Forming Machine

This roll forming machine is designed for manufacturing roofing panels with precision and efficiency. Its advanced automation ensures high-speed operation and minimal material waste.

Product Overview

High-Efficiency Roofing Panel Production

This professional-grade roll forming machine is engineered for the precise manufacturing of steel roofing and wall panels. Designed for high-speed operation at 10 meters per minute, it offers a reliable solution for producing building materials for factories, warehouses, garages, and commercial facilities. The system ensures consistent quality, easy installation, and a short construction period, making it an ideal choice for large-scale steel construction projects.

Technical Specifications

Production Speed

10 m/min

Making Speed

Power Consumption	5.5 kW
Voltage	380V, 3 phase

Dimensions & Logistics

Dimensions (L*W*H)	6600*1400*1300mm
Estimated Delivery	60 days

Compliance & Support

Certifications	BV
Service Support	Engineers available to service machinery overseas
Warranty Period	1 year

Machine Details

Primary Applications

- Roofing panels
- Wall panels
- Steel construction components
