

Roofing Sheet Roll Forming Machine

This roll forming machine is designed for manufacturing roofing sheets with precision and efficiency. It utilizes a series of rollers to gradually shape metal sheets into the desired profile.

ADDITIONAL IMAGES

Overview

High-Efficiency Roofing Sheet Production

This industrial-grade roll forming machine is engineered for the high-volume production of precision roofing sheets. Featuring a robust steel frame and advanced forming stations, it ensures consistent quality and dimensional accuracy across various metal gauges. The system integrates automated controls and durable hardened rollers to optimize output while minimizing material waste in demanding industrial environments.

Technical Capabilities

Included Components

- Decoiler
- Feeding mechanism
- Hardened forming rollers
- Automated cutting system
- Centralized control panel

Forming Stations

12 stations

Certifications

Compliance & Standards

BUREAU VERITAS, TÜVRheinland, SGS
