

Rotary Cutter Gearbox for Agricultural Machinery

This rotary cutter gearbox is designed for use in agricultural machinery. It provides efficient power transfer from the input shaft to the output shaft for driving rotary cutting blades.

Overview

High-Performance Rotary Cutter Gearbox

This rotary cutter gearbox is engineered for heavy-duty agricultural machinery, providing efficient power transfer from the input shaft to the cutting blades. Its robust construction ensures reliable operation in demanding field environments. Designed with precision, this unit features secure mounting flanges and splined shafts for seamless integration into existing rotary cutter frames.

Technical Specifications

Model Number	GTM-030L
Primary Application	Agricultural Rotary Cutter Machinery
Key Features	Robust Construction, Precision Engineered, High Durability

Design & Construction

Connection Type	Splined Shafts
Mounting Style	Flange Mount
