

Rotary Ice Cream Filling Machine

This machine fills ice cream into containers such as cups and cones. It is suitable for medium and large enterprises seeking efficient filling processes.

Overview

High-Efficiency Rotary Filling

This automatic rotary ice cream filling machine is engineered for high-volume production environments. It features a versatile, multi-lane filling system with precise dispensing nozzles and an automated conveyor for continuous operation. Designed for durability and hygiene, the unit is constructed from stainless steel and utilizes advanced electrical components for reliable control.

Operational Capabilities

Container Compatibility	Cups, Cones, Interchangeable Moulds
Suitable For	Large and medium-sized enterprises

Technical Specifications

Control System Components

- Siemens Electrical Elements
- Festo Components

Design & Maintenance

Usability Features

Simple Operation • Easy to Clean • Hygienic Design

Material	Stainless Steel
