

Rotary Rubber Block Cutting Machine

This rotating-disc cutting machine is designed for processing natural, compound, reclaimed, and synthetic rubber. It cuts rubber blocks into smaller blocks, slices, granules, and bars, and can also process other materials.

ADDITIONAL IMAGES

Overview

A robustly constructed rubber cutting machine designed for high-efficiency processing in industrial facilities.

Industrial Rubber Cutting Solution

This high-performance rotary-disc cutting machine is engineered specifically for the natural and synthetic rubber industry. It provides a robust, hydraulic-driven solution for processing rubber bales into manageable blocks, slices, granules, or bars. Designed for precision and reliability, the unit helps streamline production workflows while maintaining consistent material quality.

Applications

Compatible Materials

Natural Rubber, Synthetic Rubber, Compound Rubber, Reclaimed Rubber

Technical Specifications

Detailed view of the cutting components including the guide plate, worktable, and integrated cooling system.

Model Specifications

Feature	WQJ-1000	WQJ-1300
Blade Diameter	1000mm	1300mm
Rotational Speed	50 r/min	50 r/min
Power	4+2.2 kW	4+2.2 kW
Working Pressure	5 Mpa	5 Mpa
Production Capacity	2 t/h	3 t/h

Key Features

- Rotating-disc cutting design
- Hydraulic system for worktable motion
- Self-lubricating moving parts
- Includes cutting guide plate and pushing plate
- Integrated water box for cooling and lubrication
