

Rotary Rubbing Color Fastness Tester

This machine is used to test the dry and wet rubbing fastness of printed fabric and textiles. It is especially useful for the textile printing and dyeing industry.

Product Overview

Precision Rubbing Fastness Testing

The Rotary Rubbing Color Fastness Tester is a specialized instrument designed for the textile printing and dyeing industry. It accurately assesses the color fastness of printed fabrics under both dry and wet rubbing conditions, simulating real-world wear and tear. This essential tool provides manufacturers with reliable data to ensure high-quality production standards and prevent issues like color bleeding or fading.

Standards and Compliance

Certifications & Standards

CE, ISO 9001:2000, SGS

Operational Features

Suitable Materials

- Woven fabrics
- Knitted fabrics
- Non-woven materials
- Printed textiles

Test Methods

- Dry rubbing fastness
- Wet rubbing fastness
