

Rotary Seed Drill with Fertilizer Application

This rotary seed drill is a farm implement used for planting seeds. It integrates fertilizer application and features multiple seed hoppers and adjustable planting depth.

Product Overview

Rotary Seed Drill with Fertilizer Application

The IGBF-140DP is a versatile agricultural implement designed for efficient planting and soil preparation. It features an integrated system that simultaneously creates furrows and deposits seeds, while also applying fertilizer in a single pass. This machine is built to be towed by a tractor, offering adjustable planting depth to accommodate various crop requirements.

Technical Specifications

System Components

- Multiple Seed Hoppers
- Soil Furrowing Discs/Blades
- Fertilizer Application Mechanism
- Adjustable Depth Control

Model Number	IGBF-140DP
Key Features	Rotary Seed Drill, Fertilizer Application, Adjustable Planting Depth, Tractor Mounted
