

Rotary Shaft Seal for Industrial Applications

This high-performance rotary shaft seal is designed for demanding operating conditions. It ensures reliable sealing across a wide temperature range from -20°C to 100°C and can withstand pressures up to 0.5 MPa.

Product Overview

High-Performance Rotary Shaft Seal

This rotary shaft seal is engineered for demanding industrial environments, providing reliable sealing performance under challenging conditions. Its robust construction is designed to ensure an extended service life and consistent operation. Suitable for a wide variety of industrial applications, this seal maintains integrity across diverse temperatures and pressures.

Operating Conditions

Temperature Range

-20 °C

Min Temperature

100 °C

Max Temperature

Maximum Pressure	0.5 MPa
Maximum Operating Speed	10 m/sec

Technical Specifications

Compatible Shaft Sizes	6 - 70 mm
Suitable Applications	Industrial Machinery, Rotary Equipment, General Industrial
